CSP FY2019 Conservation Enhancement Activity

Fusarium graminearum experiment The F.

Previous crop and rotation history effects on maize seedling health and associated rhizosphere microbiome

Record keeping is such that a daily water balance is calculated and future irrigation is forecast.

Agricultural Modeling: a Replacement for Sensors on the Farm?

. The most important reason of crop rotation is to hinder the development of weeds, arthropod pests and short-persistent soil-borne diseases by reducing their population levels in the soil.

7 Steps to Complete Before Planting 2016

Migratory shorebird species in particular rely on open, moist soil or shallowly flooded conditions for foraging and security.

Environmental impact assessment of double

You need solid information from experienced growers to be sure this is the right crop for your farm. Field s must have a soil loss at or below the soil tolerance T level for wind erosion for the crop rotation and a Soil Tillage Intensity Rating STIR of no greater than 40 for each crop in the planned rotation.
