### Petroscirtes breviceps

Osteology and classification of the fishes of the family Blenniidae. The mussel blenny matures in the laboratory in 141 days after hatching Stevens and Moser 1982.

### Plagiotremus phenax, Imposter fangblenny

There are at least 51 species of Ecsenius, making this the most speciose genus among all of the blenniids, and undoubtedly more will be discovered and described.

### *Meiacanthus smithi*, Disco blenny : aquarium

Plagiotremus rhynorhynchos also aggressively mimics this symbiotic cleaner wrasse and will ambush larger fishes on its own biting off pieces of fins, scales and mucous while they are feeding Randall et al. Among site comparisons showed that the abundance of mimetic type blennies was positively correlated with the abundance of juvenile cleaner wrasses. These efforts are supported by a collection of 17 million biological specimens and a library of 200,000 volumes.

### Saber

The reasons for these different color patterns are unknown.

### William F Smith Vaniz

The living marine resources of Kuwait, Eastern Saudi Arabia, Bahrain, Qatar, and the United Arab Emirates. FAO species identification field guide for fishery purposes.

### **Plagiotremus phenax, Imposter fangblenny**

Marine Biology Research 5 5 : 496-502. Tens of thousand of species of animals and plants have been named in its pages. The remaining time is spent feeding, spawning or defending a territory.

### **Meiacanthus**

Whether the large canine teeth are visible or a deterrent to larger fish is difficult to say. Approximately 50% of all P. Approximately 50% of all P.
