Tension structures related to gliding tectonics in the Caledonian superstructure of Canning Land and Wegener Halvø, central East Greenland (1976 edition)

The book can be incorporated into various course curricula and studio exercises because of the flexibility of the format and range of expertise required for these explorations. Geological Society of America, Special Paper 419, pp. Samples of the Krummedal Sequence, collected from the footwall of the upper of two significant splays of the main extensional fault system in the region—the Fjord Region Detachment FRD—enable us to establish a relative sequence of metamorphism.
