the National Institute of Alcohol Abuse and Alcoholism

American Journal of Psychiatry 167 8 :969—976, 2010. Established mechanisms to support these efforts include at least four funding programs: Cooperative Research and Development Agreements, Small Business Innovation Research, Small Business Technology Transfer, and Strategic Program for Innovative Research on Cocaine and Other Psychomotor Stimulants Addiction Program.

**Recovery from Alcohol Use Disorder: A Virtual Roundtable Discussion of a New NIAAA Research Definition**

Age-adjusted drug overdose mortality rates were computed using direct standardization, with 2017 American Community Survey 1-year estimates utilized for population denominators. Chronic alcohol ingestion increases levels of an agent involved in narrowing blood vessels i. Less reliability and validity information is available on the NSDUH measure of AUD.

**Addiction Medicine**

Medication for opioid use disorder MOUD has established efficacy, yet less than 50% of patients are retained in care at 6 months with research pointing to the importance of 6-month retention for long-term treatment outcomes. Parents were significantly more satisfied with and likely to recommend Parent SMART to a friend than TAU.

**Alcohol Metabolism: An Update from**

## **Recovery from Alcohol Use Disorder: A Virtual Roundtable Discussion of a New NIAAA Research Definition**

This study examined current trends in overdose and other leading causes of death for individuals released from Washington State prisons, compared to those reported in a similarly designed 2013 study covering 1999—2009. Acetaldehyde, a toxic byproduct of alcohol metabolism, may decrease glutathione levels by binding to cysteine, a glutathione precursor, or glutathione itself, although at least one study Speisky et al. Reduced physiologic opioid tolerance after abstaining from use while in prison may contribute to the high risk of overdose seen in those released from prison, especially immediately after release.
