Disability Benefits

In addition, EDSS is also important because it can help track the progression of condition.

Multiple Sclerosis

Women are more than two to three times as likely as men are to have relapsing-remitting MS.

MDS: 616.834

Comparing the RFC to your daily responsibilities is another way to demonstrate to the SSA that your condition has left you unable to work. Eliot Frohman at UTSW MS Clinic, dropped her as a patient because of personal Problems and there was nothing else that could be done with medicine.

MS Publications

Scientists believe that a combination of environmental and genetic factors contribute to the risk of developing MS. What was it like when you finally had a name for all of the symptoms you'd been dealing with for so long? How is multiple sclerosis diagnosed? They also have more difficulty with mobility and everyday activities, and onset usually occurs in the 40s or 50s. Continued monitoring by a physician experienced with TSC is important.

Multiple Sclerosis Shelf

Disability levels are rated on a scale of 1-10 and an individuals rating is given based on their functional ability. Everyday Health: Did you feel you had to hide your condition initially? Also write down any new instructions your provider gives you.

Working With Multiple Sclerosis and

Researchers may have discovered a cause of multiple sclerosis

She was treated with massive doses of antibiotics. In addition, symptoms such as chronic headaches and mental disorders are common amongst multiple sclerosis sufferers, and any of these conditions can be considered disabling if they are severe enough to hinder you from performing work for which you are qualified or could be trained.

MS Publications

The disabling effects of the disease may make it physically hard to carry a pregnancy.

MDS: 616.834

See details for description of any imperfections. It usually affects the central nervous system and can result in a combination of symptoms including seizures, impaired intellectual development, autism, behavioral problems, skin abnormalities, and kidney disease. MS has been found to affect decisions about pregnancy, though.
