

Adolescent sexual abusers - differences in victim empathy skills and sexual knowledge and beliefs when compared to adolescent non-offenders.

- - Pedophilia and Homosexuality. Linked? (VERY long)

Study design	Treatment group # patients	Comparison group # of individuals	Treatment	Follow-up duration	Outcome measures	Results
Bush and Borduin ¹¹²	0	Behavioral therapy relational treatment program	20mo Control charges	14% SR		
Bush et al. ¹²⁰	360	0	Behavioral Therapy	Several days to 3y	Unspecified	8% SR
Chapman et al. ¹²¹	24 males [15-19y]	0	Cognitive behavioral relational program	5 wks	Peer polygraphy Decreased sexual abuse related sexual offense	8% SR
Conrad et al. ¹²²	52	0	Behavioral therapy	3y	Self-report at interview	12.2% SR Treatment group 37.6% comparison group
Conrad et al. ¹²³	8	8	Outpatient treatment program (multidisciplinary team approach) relational individual counseling	3y	Recurrent sexual offenses	37.5% SR Treatment group 87.5% comparison group
Davis et al. ¹²⁴	213 males [10-18y] adolescents with sex offenses	0	Behavioral therapy	20mo	Correlations	8% SR
Deblieck et al. ¹²⁵	10	0	Behavioral Therapy	6mo	Self and parent reports	8% SR
Deblieck et al. ¹²⁶	170 males	0	Behavioral Therapy	6mo to 3y	Self-report	11% SR
Deblieck et al. ¹²⁷	46	120 [no information on treatment]	Behavioral Therapy	5-8y	Control conditions	8% SR Treatment group 8% SR comparison group
Davis et al. ¹²⁸	36	0	Behavioral therapy	4y	Adult incarceration	8% SR
Davis et al. ¹²⁹	100	0	Behavioral therapy	2-3y	Control conditions	8% SR
Davis et al. ¹³⁰	53 males [12-17y]	86 males [12-17y]	Outpatient treatment program and family system	2-3y	Control charges	8% SR Treatment group 8% SR comparison group
a. Adolescent patients received specialized group therapy treatment; 11 participated in inides treatment in a custody setting (inides, 11 were referred to the SART program only by the intake source, 77 inides treatment, and 27 inides before a 16-month period). b. A general adult male population control group. SR = sexual relapse.						

Description:-

-Adolescent sexual abusers - differences in victim empathy skills and sexual knowledge and beliefs when compared to adolescent non-offenders.

-Adolescent sexual abusers - differences in victim empathy skills and sexual knowledge and beliefs when compared to adolescent non-offenders.

Empathy and adolescent sexual offenders: A review of the literature

American Journal of Psychiatry 147 9 :1184-1188. For these children, one might speculate that the long-term consequences may be different for abused children who do not manifest this type of acting out during adolescence.

Forensic Interviews With Children Victims of Sexual Abuse: The Role of the Counselling Psychologist

Diagnostic and statistical manual of mental disorders DSM-5.

Forensic Interviews With Children Victims of Sexual Abuse: The Role of the Counselling Psychologist

Comparatively, some people with mental illnesses engage in problematic sexual behavior. All studies converge in that professionals have a duty to make every possible effort to adapt the requirements of the interview to the developmental level and the particular skills of the child ; In this study, the Juvenile Sex Offender Assessment Protocol J-SOAP was used to assess risk on 96 youth receiving treatment in an institutional setting.

Sex Offenders: General Information and Treatment

To increase comparability, future studies on the treatment effectiveness of LHRH agonists should definitely consider reporting these points. The observed relationship between early childhood victimization and later problem behaviors may also be affected by practices of the juvenile justice system that disproportionately label and adjudicate maltreatment victims as juvenile offenders because of survey bias Smith et al. Programming designed to enhance empathy and promote a greater appreciation for the negative impact of sexual abuse on victims and their families.

Understanding Juvenile Sexual Offending Behavior

The measure has also shown excellent concurrent validity with other scales measuring similar constructs.

6 CONSEQUENCES OF CHILD ABUSE AND NEGLECT

Psychological Treatment The treatment of sexual offenders should be routinely informed by new research and advances in sex offender assessment, treatment, and management. Overall, 18 percent of the sample met the criteria for major depression, and 25 percent met the criteria for dysthymia. Paper presented at the Conference on Biosocial Perspectives on Abuse and Neglect.

The prevalence of risk factors for general recidivism in female adolescent sexual offenders: A comparison of three subgroups

Inappropriate sexual behavior, such as frequent and overt self-stimulation, inappropriate sexual overtures toward other children and adults, and play and fantasy with sexual content, are commonly cited as symptoms of sexual abuse in studies that compare sexually abused with nonabused or nonclinical children Kendall-Tackett et al. In early periods of neglectful behavior, the child may exhibit stressful behaviors in the forms of feeding problems, irritability, or deficits in social responsiveness that place increased demands on the parent's caretaking duties Powell and Low, 1983; Powell et al.

Understanding Juvenile Sexual Offending Behavior

Typologies of batterers have generally used one, or a combination, of three dimensions to distinguish between subgroups: frequency and severity of physical violence and related sexual or psychological abuse; generality of the violence i. Journal of Pragmatics, 23, 71-91.
