Family Assessment

Filesize: 15.24 MB

The following few pages offer one possible

way to go about doing this. If he walks two miles a day, that's a protective factor against that same heart attack.

Evaluating the National Outcomes: Parent/Family

MCCONAUGHEY, in , 2001 Compatibility with Other Assessment Procedures The ASEBA is compatible with other commonly used assessment procedures, including cognitive and achievement tests, family assessment, personality tests, developmental history interviews, medical examinations, and behavioral assessment.

Trauma Informed Care Assessments and Screeners

Child Welfare, 82 3 , 293-318. The NCFAS correlated well with other similar measures currently in use.

CEBC » Assessment Tools › Measurement Ratings

Suicide Attempt Self-Injury Interview SASII The SASII formerly the PHI is an interview to collect details of the topography, intent, medical severity, social context, precipitating and concurrent events, and outcomes of non-suicidal self-injury and suicidal behavior during a target time period. For parents of children with more serious risk factors, such as antisocial behavior and substance use, they may be seeking intervention against deviant peers, an area where parents feel the least knowledgeable and effective. The optimal condition for building parent motivation is self-identification.

Family Risk Scale

When working with many Asian-American families, it is recommended that the goals be well-defined, objective, and address practical matters. Identifying and understanding protective factors are equally as important as researching risk factors. Melbourne: Australian Family Relationships Clearinghouse, Australian Institute of Family Studies.
