## Rocky Mountain Mammals: A Handbook of Mammals of Rocky Mountain National Park and Vicinity, Third Edition on JSTOR

Breeding pair count was increased from 28 to 30 for the year 2000, after it was discovered, in 2001, that the Gravelly Pack GYE and the Gold Fork Pack CID had bred and raised pups the previous year. Glacial erosion is very strong because the massive ice blocks apply a formidable downward force on the rocks beneath them - enough to carve, crack, and push rocks of any size down the mountain collectively known as till. It also contains a very engaging section on what exactly mammals are.
