### How knowledge

It is clear that once the UK leaves the EU, as a coastal state under UNCLOS, the UK will be required to manage fisheries and fishing activities within its EEZ in a sustainable way. It is now recognized that traditional informal management arrangements were insufficient to conserve fishery resources throughout their range.

### Using AMOEBA to display multispecies, multifleet fisheries advice

Average fishing mortality by fleet and species as used in the status-quo projection. High survivability exemptions are seen as longer-term solutions which will effectively remove any choke risk in the fisheries in which they are applied.

### A Conceptual Model for Multispecies, Multifleet Fisheries

In many societies, fishing is viewed as a basic right open to all citizens and fishery resources are often viewed as a form of common property.

### How knowledge

The other approach is to incorporate additional ecosystem constraints into traditional management decisions. We found that there is a need for a modified Standard that offers an alternative management approach to meeting the stock status outcome requirements in Principle 1 sustainable fish stocks of the MSC Fisheries Standard.
