Implementing New Technology in Healthcare: 3 Challenges

Jha P, Mills A, Hanson K, Kumaranayake L, Conteh L, Kurowski C, Nguyen SN, Cruz VO, Ranson K, Vaz LM, et al: Improving the health of the global poor.

Problems with health information technology and their effects on care delivery and patient outcomes: a systematic review

In the next 20 years, the number of seniors over age 65 will increase by more than 50 percent see Figure 1 , from 34.

Overcoming health

Whether inpatient or outpatient, clinicians and patients utilize online portal systems, electronic medical records, data collection devices such as vital sign machines and glucometers, as well as personal data devices and email, to name a few. Where EMRs could afford to worry about their own needs in the past, this is now no longer the case.

Additionally, focusing on healthcare data security needs can reassure patients that their data will remain protected, even in the health data exchange process. Without proper training, coworkers will not know the best and effective use of EHR. With DOS, this kind of decision support is affordable and effective, raising the value of existing electronic health records and making new software applications possible.
