The event providing information about this can also be data.

On Nonparametric Predictive Inference and Objective Bayesianism

During the predictive prompt task, children with ADHD generated fewer plausible explanatory predictive inferences than typically developing peers and this group difference mediated a group difference in the recall of highly important events.

Annales de l'Institut Henri Poincaré. Note that the ratio between the sample size and the number of successes is still 20%.

Predictive inference

The Bayesian paradigm, unlike the frequentist approach, allows us to make direct probability statements about our models.

First, popular statistical procedures, such as logistic regression, can sharply underestimate the probability of rare events.
