View Standards Information Base

The purpose of this project is to specify a set of interfaces to allow portable access to underlying trace management services by application programs. This document is intended for those interested in the certification of a Unit of Conformance UoC or a UoC Package. Adopted 2001 Information Technology - Open Systems Interconnection - The Directory: Public-key and Attribute Certificate Frameworks Defines public key-based authentication standards for the X.

IEEE

The other documents are OSI-Abstract-Data Manipulation XOM C607 , Directory Services XDS C608 , Message Storage C305 and EDI specifications P150. The DMA controller's terminal count signal is also used to prevent the loss of data being sent by a device on the IEEE 488 bus to the microprocessor, which typically happens when the microprocessor has to service another device in the midst of receiving a long message from the first device. The previous specification will be retained for only as long as branding is available for products based on it.

IEEE Standard Codes, Formats, Protocols, and Common Commands. for Use With ANSI/IEEE Std 488.1

FACE-specific terms are outlined in the Glossary. It defines application programming interfaces based on the Directory Services XDS interface C317 , OSI-Abstract-Data Manipulation XOM C315 , and Federated Naming: The XNF Specification P403. Does not contain tests which can be used to demonstrate this conformance.

IEEE

It is an enhanced version of the Commands and Utilities V3 Product Standard and is required for UNIX 03.
