IBM PCjr Accelerator

Each component in the system is rated for 5A on the individual rails but the system is limited to 60W overall minus the switching overhead of each converter. Only one sound source can be selected at a time; the sources cannot be mixed.

IBM PCjr Documentation

With a 45W power board, you can use three sidecars comfortably.

IBM PCjr Personal Computer Hardware Manual Reference Library Guide to Operations. The Mac version used variable-speed rotation to squeeze 800K on an otherwise 720K disk, which made the older disks incompatible with newer drives. If you got more than that, you probably reverse-engineered the code, the way I did.

IBM PCjr Easter Egg

The keyboards had a serious annoyance - there were not enough keys! I had one of these on my personal machine, and I used it often - poorly written PC software often locked the machine up. Additional external DRAM in sidecar expansion modules is refreshed independently.

Amiga Yep, and stories about the Amiga were already appearing in the literature. It wasn't true multi-tasking, but good enough for rock 'n' roll. Not only is there no mechanism by which I can see what you describe actually happening with a keyboard - and I have personally developed USB HID devices, so I am not completely ignorant of the issues involved - but I find it profoundly difficult to imagine that there is a secret cache of "high

speed keyboards' that I've never heard about, and whose hardware is special enough to make them cost more, but whose presumably extremely low volume doesn't make them prohibitively expensive.
